

MWES IN UD TREEBANKS – WG 4

Koenraad De Smedt, Victoria Rosén and Paul Meurer

Goal of demo: show INESS Search for studying MWEs in treebanks

Case study: UD treebanks attempt to provide parallel annotation for many languages. Are the annotations consistent within and between treebanks?

- Are dependency relations *mwe*, *name* and *compound:prt* used in all UD treebanks?
- Which dependency direction? *ya* ← *que* or *ya* → *que*? *New* ← *York* or *New* → *York*?
- Which relation? *Hillary Clinton*: *name*, *nmod*?
- How many particle verb constructions in Swedish are discontinuous?

For some answers, see our abstract, poster and demo
