

Generating LFG/XLE MWE entries from IDION (a theory neutral lexical DB)

P. Minos, S. Markantonatou, G. Zakis, E. Margariti

- IDION <http://idion.ilsp.gr/>
- A lexical DB for MWEs: origins, semantics, morphosyntactic analysis, corpus syntactic properties, diathesis alternations, lexical relations, usage examples)
- IDION is theory neutral
 - Standardised codification of morphological properties
 - Basic lexical/phrasal categories such as N, NP, V, VP
 - No codification of predication relations- syntactic functions

IDION cannot be used directly by any parser; some **syntactic ‘interpretation’** has to be performed by an application that reads information off IDION and feeds the parser.

- We report on an application that generates LFG/XLE entries from IDION
- We discuss the pros and the cons of the theory neutral encoding
