

## Corpus

Petya Osenova, Aleksandar Popov and Kiril Simov (IICT, Bulgarian Academy of Sciences)

WG1: Lexicon-Grammar Interface

### 1. Overview

The aim is to highlight the following issues:

- Realizations of different MWE types in two languages with different morphological complexity and word order
- A typology of alignment possibilities among various types of MWEs

### 2. Data and Preliminary Observations

**Corpus:**

The parallel BG-EN corpus consists of: SETIMES, PenTreeBank and CSLI dataset: 1758 sentences (31 257 tokens).

**Types of alignments:**

### 3. Mapping to PARSEME Classifications

Within MWE-MWE relations the correspondences are:

Straightforward

- Light verbs in one language often correspond to similar constructions in the other
- Complex prepositions in English tend to have structurally similar counterparts in Bulgarian
- Nominal MWEs of the kind A N seem to be often preserved across the two languages
- The MWE construction V NP (not mentioned in WP1) also seems to be sometimes preserved in translation
- Multi-word adverbial constructions
- Conjunctions composed of multiple words

Cross-language specific types

- English phrasal verbs often correspond to Bulgarian se-verbs
- N N compounds in English can map to A N compounds in Bulgarian
- N N in English can also be translated as N PP in Bulgarian, where the meaning carried by the first noun is expressed through a PP
- N and N constructions in English can apparently translate in similar coordinated constructions in Bulgarian, but constructed out of different POS constituents
- An idiomatic clausal construction (V NP PP) can be translated with a light verb construction in Bulgarian
- V AP (not in WP1) in English can be translated with minimal changes into V AdvP in Bulgarian
- V PP (not in WP1) in English can be translated as V NP in Bulgarian

### 4. Conclusions

**MWE-to-MWE** and **MWE-to-word** are more frequent than **MWE-to-phrase**

Such knowledge can be used in:

- designing automatic translation systems
- singling out best practices in human translation
- can illuminate the ways the two languages differ in expressing meaning
